HELIPRO HELICOPTER SIMULATOR

AT LAST....

A dedicated, affordable helicopter control system that feels like the real thing. With unique force trim function (actuated electronically from the cyclic) the Helipro has a very realistic feel. Customers for this new machine include the Saudi Arabian Military who use it to train real pilots.

KEY FEATURES

Affordable
Great for teaching motor skills and procedures
CAT B rating available as option
Cyclic grip from real aircraft
Working twist throttle on collective
Extremely robust design and accurate flight model
Works great with MS Flight Simulator and X-Plane
Works great with Dodosim (see dodosim.com)
Works great with fixed wing aircraft 'as is' or add a 'bolt on' throttle
Quality, high grade electronic components inc. 12 bit resolution motherboard
Made mostly from German engineered high grade alloy and stainless steel
Unique 'force trim' / 'trim release' function (actuated electronically from cyclic)
USB connection - simply 'plug and play'
Stylish and comfortable seat. Adjustable (forward and back) and tilting back rest
Shipping world-wide

NEW!

Twist throttle, buttons and switches on collective modelled on Bell 206 Jetranger. Coming soon: replica 206 collective with mechanical idle release button
